This Worldwide Equipment Guide (WEG) describes the spectrum of worldwide systems and system trends in the Contemporary Operational Environment (COE), serving as an authoritative "encyclopedia" of weapons around the world. This is the newest edition revised in 2011. This handbook is one of a series that describes a contemporary Opposing Force (OPFOR) for training U.S. Military commanders, staffs, and units. Together, these handbooks outline an OPFOR that can cover the entire spectrum of military and paramilitary capabilities against which the U.S. Military must train to ensure success in any future conflict.

Part Two of Volume One covers antitank weapons, artillery, command and control, chemical, WMD, and information warfare.

Antitank and Anti-armor - As armored combat vehicles added more protection and ascended in importance on the battlefield, so did systems designed to stop them gain importance. The umbrella term antitank (AT) originally denoted systems specifically designed to destroy tanks. Today it is more broadly constructed. Modern combat is combined arms combat. Mechanized forces include other armored combat vehicles, such as armored reconnaissance vehicles, infantry fighting vehicles, armored personnel carriers, etc. In order to address the whole spectrum of threats on the modern battlefield, new systems are being developed and older systems redesigned. Examples are heavy armament combat vehicles (HACVs) and heavy combat support vehicles.
