Event History Analysis with R (Chapman & Hall/CRC The R Series)

Göran Broström

Event History Analysis with R (Chapman & Hall/CRC The R Series) Göran Broström

With an emphasis on social science applications, **Event History Analysis with R** presents an introduction to survival and event history analysis using real-life examples. Keeping mathematical details to a minimum, the book covers key topics, including both discrete and continuous time data, parametric proportional hazards, and accelerated failure times.

Features

- Introduces parametric proportional hazards models with baseline distributions like the Weibull, Gompertz, Lognormal, and Piecewise constant hazard distributions, in addition to traditional Cox regression
- Presents mathematical details as well as technical material in an appendix
- Includes real examples with applications in demography, econometrics, and epidemiology
- Provides a dedicated R package, **eha**, containing special treatments, including making cuts in the Lexis diagram, creating communal covariates, and creating period statistics

A much-needed primer, **Event History Analysis with R** is a didactically excellent resource for students and practitioners of applied event history and survival analysis.
