Information Technology in Educational Management (IFIP Advances in Information and Communication Technology)

Information Technology in Educational Management (IFIP Advances in Information and Communication Technology)

Educational institutions in which administrators, managers and teachers will be working in the late 1990's will be far different from those of today. Schools, which until recently were lagging behind in the implementation of information technology (IT) in their administration and management, are now attempting to close the gap. A massive and rapid computerization process in schools, school districts and throughout the other levels of the educational system, including universities, has made computers an integral part of the educational management scene. A computer on the desk of every educational management staff might become a reality in the near future. The term "IT" includes three main components: hardware, software - mainly management information systems (MIS)/decision support systems (DSS) and human factors. Presently, successful implementation depends on adequate software and on human factors. MIS/DSSs are being implemented with the aim of providing meaningful support for school employees in their daily activities, and to improve their performance, effectiveness and efficiency. Much like at universities, usable and accessible school databases are being established, encompassing data on students, teachers, employees, classrooms, grade levels, courses, student achievements and behavior, school space, curriculum, finance, inventory, transportation, etc.
